PROFILE

I study Computer Science because my goal is to innovate how regular people live and enter a field that requires constant learning throughout life. One of my first professional projects was an iOS-app for my high school that helped students and teachers share their IT knowledge with newly arrived students. This project taught me early on that nothing changes by itself - take initiatives and learn what you need to change the world! In my free time I enjoy playing drums and singing with my band in order to relieve stress for the next week.

CORE VALUES

My favourite thing is developing awesome things by constantly learning, which is reflected in my core values:

Diversity: My family comes from many different countries around the world and I know from experience that everyone have different wisdoms to share with each other - especially in a work place!

Empower each other! Well composed teams beats egoistic individuals

Performance is achieved via effort and not how smart you are. There are no limits.

EDUCATION

KTH Computer Science (2016-2019-2021)

Technology Rudbeck Gymnasium in Sollentuna

Leadership course for children summer camps (2014-2015)

PROJECTS

GitHub: <https://github.com/worldyn>
